Functional Group ID= **CP**

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Pricing Support Transaction Set (251) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to request or transmit budget or actual data for labor and overhead rates, factors, and other supporting data for a specified period of time. This bi-directional transaction set can stand alone, or can be used to support the Contract Pricing Proposal (805) Transaction Set.

Notes:

1. This transaction set is used by a contractor to provide "supporting cost or pricing data" or "information other than cost or pricing data" to a contracting officer.
2. All numbers cited in this transaction set shall be transmitted as a continuous number without extraneous characters except where such characters are a part of the number.

Transaction Set Notes

1. The SPI segment identifies the security classification or contractor level of protection for the pricing support, the contract or proposal number against which the pricing support applies, and whether the pricing support is certified.
2. When the N1 loop is used, it will carry the name and address of the party to be contacted if clarification about the proposal or requests for additional information concerning the proposal is required.
3. The PPL loop identifies the proposal schedules (e.g., G&A expenses, overhead expenses) included in

the transaction. PPL01 carries a code that identifies the schedule type, and PPL04 carries a free form description or name of the schedule.

4. The PO1 loop provides bill of material and purchase history information.
5. The LX loop provides purchase history information.

Segment:	PL Proposal Cost Logic
Position:	050
Loop:	PL
Level:	Detail
Usage:	Optional
Max Use:	1
Purpose:	To describe the cost logic used when pricing a particular aspect of a proposal
Syntax Notes:	
Semantic Notes:	<ol style="list-style-type: none"> 1 PL01 is the logic sequence number. 2 PL03 is the name of the cost element being proposed. 3 PL05 is a text description of the cost element contained in PL03. 4 PL06 is an occurrence counter that indicates the order of items to appear in a cost summary data display.

Comments:

Notes: *1. The PL segment should be used in a bottoms-up approach, e.g., if total direct labor dollars is composed of engineering labor dollars plus manufacturing labor dollars, then the calculation formula for these must be presented in the transaction set before the calculation for total direct labor dollars.*

EXAMPLE:

PL*1*DO*DEL*E*DIRECT ENGINEERING LABOR *2002 n/l
PL*2*HR*DELH*M*DIRECT ENGINEERING LABOR HOURS n/l
PL*3*A8*ELR*F*ENGINEERING LABOR RATE n/l
PL*4*DO*DML*E*DIRECT MANUFACTURING LABOR*3002 n/l
PL*5*HR*DMLH*M*DIRECT MANUFACTURING LABOR HOURS n/l
PL*6*A8*MLR*F*MANUFACTURING LABOR RATE n/l
PL*7*DO*TDL*E*TOTAL DIRECT LABOR *1002 n/l
PL*8*DO*TDEL*A n/l
PL*9*DO*TDML*F n/l

2. If the proposed labor rates are at a lower level, e.g., by engineering labor category or by department, then the PL segments must start at a lower level to conform to the bottoms-up convention.

3. Each formula provided in this segment shall be completed before another formula is started. THERE SHALL BE NO FORMULA WITHIN ANOTHER FORMULA.

4. When a value provided in the 2/PDD/140 segment can be calculated, a formula MUST BE PROVIDED for that calculation. This formula is REQUIRED even when the actual data involves the addition/subtraction of a "zero" value or multiplication/division by 1.

5. If the formula provided in this segment is for a total, the PD/PDD segments shall be used to provide the total.
